

Please DENY the RM-10412 request. Author Leggett apparently has no concept of the free marketplace. His proposal will destroy amateur radio as we know it. Many amateur operators cannot afford radio prices now, let alone if they are required to be "field repairable"

or EMP resistant. Amateur radio operators provide a very needed communications service to this country in the event of disaster or emergency. Please let the market decide what type of equipment should be sold. Thank You, Ken Amateur Radio K9KJM
